

IP TRANSIT

SPEED. SEAMLESS. SECURE. SCALABLE.

Our IP Transit network provides your business with global connectivity and maximum availability. We have worked with multiple domestic and international Tier 1 providers to develop a premium carrier grade IP Transit solution.

Our network has been built to provide you with the shortest possible path to your most visited Internet destinations, providing you with fast and resilient access 24/7. Each upstream provider is capable of handling 100% of our traffic in each POP (N+1 provisioning), ensuring that we have more than enough capacity for any customer's requirements.

We have direct access to a worldwide network engineering team for pro-active management which provides you with faster fault response times and greater control over your traffic.

DELIVERY OPTIONS

- 1:1 Flat Rate
- 95th Percentile/Burstable
- Volume

Manage your IP Transit service via our online service portal, giving you direct self managed access to speed upgrades, prefix management, traffic graphing, reports, looking glass and other service management tools.

FEATURES

- Access to Tier 1 domestic and international IP networks
- IPv4 and IPv6 ready
- A large number of direct peering relationships
- Shortest possible path to top traffic destinations
- On-net Akamai and other content distribution networks
- Fast support and greater control over network traffic
- Designed for superior performance and high throughput
- Above industry standard SLAs
- Completely redundant network with the option to take multiple physical handoffs nationally
- Scalable - solutions for 1Mbps through to 10Gbps
- Multiple delivery options to suit every business
- Robust high-speed backbone

IP TRANSIT

SPEED. SEAMLESS. SECURE. SCALABLE.
